● Tap to enter Locating Screen.

Select the desire date.

Tap on any point to show the GPS location detail.

Tap to perform audio monitoring (only available for pre assign number).

Tap to perform historical location tracking.

Tap to add Security Fences

Salpido TRAXX/ Battery Use and Safety Important!

Handle and store batteries properly to avoid injury or damage. Most battery issues arise from improper handling of batteries and, particularly, from the continued use of damaged batteries.

- Do not disassemble, crush, puncture, shred, or otherwise attempt to change the form of your battery. Do not put a high degree of pressure on the battery. This can cause leakage or an internal short-circuit, resulting in overheating.
- Do not let battery come in contact with liquids. Liquids can get into the battery circuits, leading to corrosion. Even when the watch appears to be dry and appears to operate normally, the circuitry could slowly corrode and pose a safety hazard. If the battery gets wet, have them checked by your service provider or contact Salpido, even if they appear to be working properly.
- Do not place your battery in or near a heat source. Excessive heating can damage the watch or the battery and could cause the watch or the battery to explode. Do not dry a wet or damp battery with an appliance or heat source such as a microwave oven, hair dryer, iron, or radiator. Avoid leaving your watch in your car in high temperatures.

Health and Safety Information

- **Caution:** Some applications or prolonged usage may increase device temperature. Prolonged skin contact with a device that is hot to the touch may produce skin discomfort or redness, or low-temperature burns. If the device feels hot to the touch, discontinue use and close all applications or turn off the device until it cools. Always ensure that the device has adequate ventilation and air flow. Covering the device with bedding, your body, thick clothing or any other materials that significantly affect air flow may affect the performance of the device and poses a possible risk of fire or explosion, which could lead to serious bodily injuries or damage to property.
- Do not dispose of the watch or the battery in a fire. The watch or the battery may explode when overheated.
- Do not handle a damaged or leaking battery. Do not let leaking battery fluid come in contact with your eyes, skin or clothing.
- Avoid dropping the watch. Dropping the watch or the battery, especially on a hard surface, can potentially cause damage to the watch and battery. If you suspect damage to the watch or battery, take it to a service center for inspection.
- Never use any charger or battery that is damaged in any way.

- Do not allow the battery to touch metal objects. Accidental short-circuiting can occur when a metallic object (coin, key, jewelry, clip, or pen) causes a direct connection between the + and - terminals of the battery (metal strips on the battery), for example when you carry a spare battery in a pocket or bag. Short-circuiting the terminals may damage the battery or the object causing the short-circuiting.

Important! Use only Salpido-approved batteries, which are specifically designed for your watch. **WARNING!** Use of a non-Salpido-approved battery may present a risk of fire, explosion, leakage, or other hazard. Salpido TRAXX's warranty does not cover damage to the watch caused by non-approved batteries and/or chargers.

Silicone Watch Band Care

- A Silicone band is susceptible to discoloration and deterioration from moisture, sweat and direct sunlight. Silicone strap may tear or strap colors fade. Constant care is required and this includes the circumstances in which the watch is worn. Refrain from wearing Traxx while bathing, swimming and working with water.
- Always keep the watch clean to avoid from skin irritation.

Cleaning Method

- Wipe off moisture and sweat as soon as possible by gently rubbing it with a soft damp cloth, and place it in a well-ventilated area after removing it from the wrist. Do not expose your watch to sunlight for extended periods (eg. on a car dashboard) since this may lead to discoloration/ transformation/ breakage of your Traxx silicone strap.
